DETAILED ACTION

Response to Arguments

1. Applicant's arguments, filed March 6, 2006, with respect to claims 1-20 have been fully considered and are persuasive. The rejection of claims 1-20 has been withdrawn.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takata et al (US Patent 4,913,307) in view of Okamoto et al (US Patent 5,157,901).

Takata discloses a system for sealing a container. As shown in the figures, the system comprises heat-seal ring 9 having non-pressing portion 12 and circular projections 10 and 11. See col. 4, line 20 through col. 5, line 26.

However, Takata does not disclose the knurls as claimed by the applicant.

Regarding this difference, the applicant is directed to the reference of Okamoto.

Okamoto discloses a system for sealing a container. As shown in Fig. 3, the hot plate used to seal the containers has a sealing plane 18 and an embossed portion 20. This embossed heat-sealing plate creates a knurled seal 6, 16 and 26 in the packages. See col. 3, lines 10-26. Thus, the hot plate disclosed by Okamoto has a knurled

Application/Control Number: 10/698,337

Art Unit: 1734

configuration. In addition, Okamoto discloses that such knurled seals form strong, esthetically pleasing seals (see col. 5, lines 34-45).

It would have been obvious to one having ordinary skill in the art to employ knurls on the working surface of a heat-sealing plate, as taught by Okamoto et al, in the system of Takata in order to form strong, esthetically pleasing seals. In addition, it is the examiner's position that without the disclosure of unexpected results, the specific configurations (i.e. tapered, conical, threaded bolt, etc.) claimed by the applicant are within the purview of one having ordinary skill in the art and would have been obvious to employ in the device of Takata in order to facilitate welding of various materials.

Regarding claim 1, it is the examiner's position that the knurled welding surface disclosed by the device of Takata in view of Okamoto described above has the same structure as applicant's claimed invention and thus *inherently* provides varying high and low temperature points in the perimeter in the manner claimed by the applicant.

Telephone/Fax

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to James Sells whose telephone number is (571) 272-1237. The examiner can normally be reached on Monday-Friday between 9:30 AM and 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chris Fiorilla can be reached at (571) 272-1187. The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.
